What is going on between the UK and EU? Some weeks ago, we posted an article about the UK and the EU. It was an interesting read, we don't agree on everything, as you could see, but I am glad that all of us agree on one thing: Brexit is a terrible idea and the most incompetent political decision ever. That's what I will focus on in this article. I'll start with the economic situation and economic consequences. But before I do, I want to point out a few things. Before Brexit, the UK had a balanced budget and the economy was growing strongly. The country was on track for growth with low unemployment. After Brexit, the UK has seen a huge increase in debt and the economy is shrinking significantly. This all sounds like what was expected when the UK voted to leave the EU. Now the EU is the richest, most powerful trade bloc in the world. They have access to the biggest single market in the world and the single currency. At the moment, this is the strongest economic bloc in the world, by far. So what will be the consequences if the UK leaves the EU? For those who don't know, the main consequence is that the UK will no longer be a member of the EU and will not receive any of the benefits from being in the EU. For one, all trade between the UK and the EU is likely to be negotiated on a case by case basis. No "large bodies" will be developed for trade. Second, all UK exports will be subject to tariffs. Third, all UK imports will be subject to import tariffs. And that's it. We don't know how high the tariffs will be. The UK government does not want to give EU leaders a chance to refuse to negotiate with them. So they have agreed to this punishment without asking the EU if they want to negotiate or not. If the EU wants to negotiate and withdraw its objections, we don't know if it will happen or not. The EU has not said that they don't want to negotiate. They have said that they don't want to negotiate until UK representatives first explain the problem.

So I think we can expect a lot of posturing on both sides of the equation and no resolution until the UK gets back to the negotiating table. But I think there are other, more immediate problems for the UK. First, a1d647c40b
