Q: Where to find opensource variants of common DSSS parameters I would like to receive opensource codes/schemes of DSSS parameters in my company because my coworkers have asked me to share them. I looked at the DSSS document, but it didn't really tell me where to find them. What I am looking for are variants of the DSSS parameters that change the values in an attack scenario. For example the gain of DSSS can be increased up to 120 db at 1w with this code: `dds_set_gain(dds, gain=120, samplerate=500)` Is there anything like this for the other parameters? A: Open-source code for various products can be found at github. The script to send the siren signal is here: Pseudo-code for various functions can be found here:
