AutoCAD's 2016 release

provides the new Blending feature and enhancements to the DWG format to support the use of 3D models in your drawing. The new features available in AutoCAD 2016 are listed below. Blending In

AutoCAD 2016, you can
blend two layers
together using a new tool
called the Blend tool,
available in 2D and 3D
modeling. The Blend
tool works in a manner
similar to the Mix tool
and Blend Modes. To

create a solid blend, select the two layers that you want to blend, and then select the Blend tool. In the new Blend tool, select the layers that you want to blend, then select the option to Blend them. When you

have selected the two layers that you want to blend, you can select the type of blending you want to do. Select Object to blend two existing objects, or select One of Selection to blend the existing

layers with one of the layers that you selected. The new Blend tool is a great tool to be able to blend two objects together for the purposes of showing how an object is built on a foundation or for when

an object is being assembled together. You can also use the Blend tool to blend and clean up your work. When you select the Two objects option in the new Blend tool, it opens a dialog box with a default

setting of 15% overlap. You can make your own blend by dragging the points. When you press the down button, you will see the percentage used to blend the objects. For example, if you drag the points, it

might look like this. If
you drag the points
down, the percentage
increases until the top

What's New In AutoCAD?

Numerous usability enhancements: New functionality that brings AutoCAD closer to the SketchPad-based drawing experience. Create sketches directly in the drawing

environment and share your ideas with others without leaving the drawing. (video: 3:05 min.) AutoCAD now supports simplified source design rule checking (SDR). Check the entire drawing for

compliance with industry standards. Use the Design Check tab in the dialog box to easily create a DRC report for your designs. (video: 5:23 min.) New functionality that allows you to review or browse

a drawing while you're editing it. Navigate directly to the area you want to edit. (video: 3:55 min.) The Feature Selection dialog box has been redesigned to make it easier to use. Import new and select existing

drawings from the folder and the file system, or from an active network folder. (video: 3:19 min.) Drafts saved with the Global Action Flag (GAF) are saved to a new hidden "Drafts" folder. You can

now delete this folder from the Program Files folder, where it is stored by default. (video: 2:07 min.) Many of the commands that are not exposed in the ribbon are now visible in the menus, with the

exception of commands that are only valid on the command line (for example, the **CMDECHANGELIST** command). (video: 3:33 min.) Rapid screen capture has been extended to also include

the screen border. Take a screenshot of a specific section of your drawing that can be used for printing or sharing your designs. (video: 2:30 min.) New ribbon tabs: Tabs have been added to the ribbon that

provide new methods to achieve specific design objectives. All ribbon tabs offer an improved set of commands.

Expanded Exchange integration: Redesigned import/export feature to work better with large

scale AutoCAD data and improved encryption.

Also includes improved security for local file system imports. Ability to import large scale data from AutoCAD into Excel or Power BI (BPAccount, 2019).
