History AutoCAD was originally named Alias DWG, then AutoDWG. In 1993, AutoDWG was renamed AutoCAD. The name was changed to Autodesk AutoCAD in 1997 to avoid legal problems with the other name. On April 18, 2017, Autodesk began a "Save 50% on every AutoCAD subscription", offering a $50 discount to new users and a 5% discount to current users for each subscription bought by users who were a customer of the offer. On April 19, 2017, Autodesk announced the end of the offer, noting that the discounts are only available for the version 14 release and would not be available for the release of the version 15 release. Versions The first release of AutoCAD was AutoCAD R12, which was released to manufacturing customers in 1992. AutoCAD LT was introduced in 1993. AutoCAD DesignCenter was the first graphical user interface application bundled with AutoCAD, and was followed by AutoCAD MapInfo in 1998. AutoCAD LT 2004 was the first version of AutoCAD to be priced at US$495 (A$600), including all upgrades. Features Project, information management and analysis AutoCAD has integrated Project, Information Management and Analysis (PIMA) that allow users to visualize, plan, and automate the critical processes of making 3D buildings. PIMA is accessible from other programs like Navisworks, Revit, Structural Desktop, PlanGrid and AutoCAD. In AutoCAD PIMA, users can control progress by viewing progress and financial data (see below). This makes it possible to view critical progress, schedule important jobs, and control and monitor activities in projects. Users can define their own project schedules, prioritize projects, and plan processes to improve efficiencies. Users can create reports and create saved searches of the database to help monitor the progress of projects. PIMA is designed to access the same data and standards as the main AutoCAD application. This enables the use of one set of data across all major platforms, like Windows, Macintosh, iOS, Android, and Web applications. The first release of PIMA included the BuildingInfo Database (BIF), which can manage data about building projects, including construction costs, project schedules, drawings, and workflows. BIF also supports the BIMS Open Building model standard and the BIM a1d647c40b
