A new survey showed that Apple

iPhone users generally are not happy with the latest changes. If you were able to install Mac OS X 10.11 (El Capitan) a few days ago and have been. SnkStun: A Forwarding tool to monitor L2 Ethernet between SFP module and switch - sanjayrota =====
sanjayrota Hi Everyone, I am building a network monitoring system. It's based on snkstun, to collect packets on the top of Ethernet interface. This is just a preliminary version. The source code is free for all. I am always

interested in your comments, suggestions, ideas. Thank you in advance. ~~~ jeffhuang If it's about OS X, I might be interested. I'm trying to build a version for it.

Also does it support monitoring multiple interfaces, or just one? ~~~ another evan I have written a version for OS X that's dedicated to just monitoring a single interface. New insight into the structure and function of the Escherichia coli Kdp potassium transporters. The Escherichia coli membrane protein KdpD is an

integral outer membrane channel that transports potassium from the cytoplasm of the bacterium to the periplasm. It shares a unique N-terminal 11-helix domain with the established sodium- and proton-dependent (NhaC) transporters and a C-terminal nine-helix transmembrane domain with a tricarboxylate-transporter (TtcA). A recent crystal structure of KdpD showed a structural similarity with the NhaC family and revealed an octameric channel formation in the crystal. The structure and the

transport properties of the NhaC family are thought to be important for substrate selection, while the function of TtcA and KdpD is unknown. Here we report the expression of the NhaC and KdpD proteins in a heterologous system. The yield of NhaC appears to be significantly higher than KdpD.

The two transporters are functionally expressed in the membrane fraction, but the latter protein is predominantly located in the cytoplasm. These results provide the first direct

experimental proof that KdpD is an integral membrane transporter, and indicate that the 3e33713323
