Present... Yojimbo is a Japanese word that means a small bodyguard. The application is a free player for online video games with a simple interface and easy to use, albeit with some limitations. The problem with Yojimbo is that it can't play all of them. It does not support flash games at all, but only HTML5. It also does not allow background synchronization. Having said that, it's a good app for casual play, and doesn't require any skill to use. The screen is simple, with small buttons in the main menu, and none at all in the options bar. The only way to play is through the button at the bottom of the screen, and that only works through opening a URL. The search feature works in a specific manner. However, if you specify the number of games to display, the app is going to limit the results based on that number. This is done using the number at the end of the game title. For instance, if the game is "Halo 4", only results with the same number of players (4) are shown.

If you're looking for a simple image editor with a limited number of options, this is it. If you're looking for more control or tools, then free photo editing applications like PicMonkey, or Pixlr, are probably what you need. FotoMagico, though, isn't really an editor. It's a photo frame application. It offers a great way to save family photos, but that's about it. It can't edit images, and it doesn't support a dark mode, which is a major oversight, because, as anyone who works from home and doesn't enjoy bright lighting, can tell you. The application is a one-page affair, with simple tools for viewing, ordering, and putting the images in frames. What's nice is that it's ad free. The app offers
