You can read the free software manual. Suprascapular Artery Perforator Flap: An Anatomical Study and Clinical Application. The aim of this study is to describe the anatomy of the suprascapular artery perforator and its associated characteristics, such as diameter, and to present a clinical case of free tissue transfer for a complex defect involving both the scapula and the chest wall. A prospective anatomical study was carried out to evaluate the characteristics of the perforators arising from the suprascapular artery and to describe their anatomy. Four fresh human specimens were dissected. The diameters of all vascular perforators to the suprascapular artery were measured. A clinical case of a patient in which a free flap transfer was used to reconstruct a tumor resection and a subsequent chest wall defect with a problematic area in the clavicular region was described. The mean length of the suprascapular perforators was 9.8 cm. The mean diameter of the main perforators was 4 mm and the vessel diameters ranged from 2 to 10 mm. In the clinical case, the donor site area showed minimal complications. The suprascapular artery perforator flap is useful for large defects involving the scapula and the chest wall and it is a reliable option in these situations. the 100 pill high I took and the 100 pill long I will be working on a series of articles in which I will be documenting my experience down the line.
